PROFESSIONAL SUMMARY

AI/ML undergraduate with hands-on experience in building real-world AI systems across Computer Vision and Natural Language Processing. Developed projects including a multi-agent LLM-based FAQ generator, a CNN-based face recognition system (91% accuracy), and an AI voice assistant integrating NLP and APIs. Skilled in Python, TensorFlow, OpenCV, and LLM APIs, with a strong interest in designing scalable and efficient AI-driven applications.

TECHNICAL SKILLS

Programming Languages: Python, C, C++

Machine Learning: Supervised & Unsupervised Learning, Regression, Classification, Feature Engineering

Deep Learning: Neural Networks, CNN, RNN, LSTM

Computer Vision: OpenCV, Image Processing, Face Recognition

Natural Language Processing: TF-IDF, BoW, CBoW, N-grams, Text Preprocessing

AI & LLM Technologies: LLM APIs, Prompt Engineering, AI Agents

Libraries & Frameworks: NumPy, Pandas, Scikit-learn, TensorFlow

Databases & Tools: MongoDB, MySQL, Git, GitHub, Jupyter, VS Code

PROJECTS

AI-Powered FAQ Generator (Multi-Agent System)

Tech Stack: Python, LLM APIs (DeepSeek), MongoDB, Multi-Agent Systems

- Developed a multi-agent AI system to automatically generate FAQs from user-uploaded documents or raw text using LLM APIs.
- Designed an intelligent pipeline where agents handle text processing, prompt generation, and response structuring for improved output quality.
- Implemented MongoDB-based caching to store previously generated FAQs, reducing redundant API calls and lowering response time and cost.
- Enabled export functionality allowing users to download generated FAQs in PDF and DOCX formats.

Virtual AI Voice Assistant

Tech Stack: Python, Speech Recognition, NLP, Text-to-Speech, APIs

- Built an AI-powered voice assistant capable of executing commands using speech-to-text and text-to-speech pipelines.
- Implemented NLP-based command processing to handle tasks such as email automation, web search, and application control.
- Integrated external APIs for real-time functionalities including weather updates and music playback.
- Improved command recognition accuracy through audio preprocessing and optimized parsing logic.

Smart Student Identification System

Tech Stack: Python, CNN, OpenCV, MongoDB

- Developed a CNN-based face recognition system for automated attendance, achieving ~91% accuracy on a dataset of 500+ images.
- Applied image preprocessing and feature extraction techniques to improve recognition performance under controlled conditions.
- Integrated database functionality to map detected faces with student records for real-time identification.

ACHIEVEMENTS

- Presented a Multilingual Text Summarization project at Anveshan (AIU-level student research competition), focusing on NLP-based cross-language summarization.
- Finalist in All-India Game Development Competition organized by KRAFTON in collaboration with TGELF, competing among teams nationwide.

EDUCATION

B.Tech in Artificial Intelligence & Machine Learning
Manav Rachna University, Faridabad
2023 – Present

CERTIFICATIONS

- Full Stack Web Development – Coding Blocks (2023)
